

# CARE INSTRUCTIONS

## 1. STORAGE:

Store doors in a flat position in a dry area at all times. Avoid exposure to excessive moisture or extreme temperature fluctuations.

## 2. MEASUREMENT AND SIZING:

Before purchasing a door, accurately measure the height and width of the opening where you intend to install it. Ensure the measurements are precise to select the appropriate door size for a proper fit.

## 3. UNPACKING AND TRIMMING:

Remove any packaging or protective coverings from the door. Contact ABS Doors & Timber for trimming allowance guidelines to fit the door to the opening, if necessary.

## 4. EXTERIOR DOORS:

For exterior doors, it is important to note that they require exterior-grade finishes to protect them from the elements.

Applying suitable finishes, such as weather-resistant paints or sealants, is essential to prevent damage and maintain the warranty.

## 5. INSTALLATION:

Install entrance doors in weather-protected situations whenever possible to minimize exposure to harsh weather conditions.

Use at least three hinges when fitting solid doors. Larger doors may require four hinges or a pivot hinge system to adequately support the weight.

## 6. HINGE PLACEMENT AND SIZE:

Follow the manufacturer's guidelines regarding hinge placement and size for proper installation.

Adhering to these recommendations ensures the door's optimal operation and helps prevent sagging over time.

Remember to consult the specific care and maintenance instructions provided by ABS Doors & Timber the manufacturer for any additional guidance. We are here to assist you.
